DIAGNOSTIC APPROACH

Pulmonary embolism

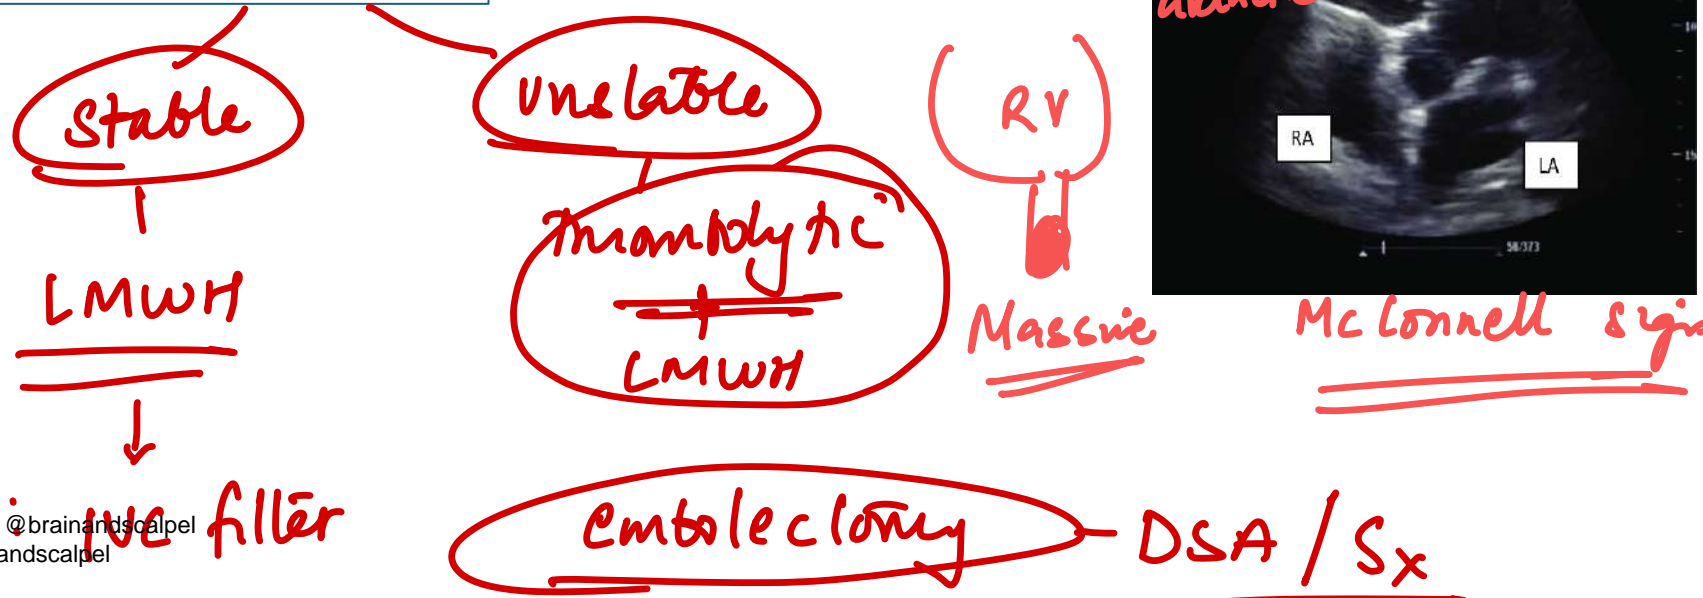

Diagnostic algorithm:

High Clinical Likelihood of Pulmonary Embolism (PE) if Point Score Exceeds 4

CLINICAL VARIABLE	PE SCORE
Signs and symptoms of DVT	3.0
Alternative diagnosis less likely than PE	3.0
Heart rate >100/min	1.5
Immobilization >3 days; surgery within 4 weeks	1.5
Prior PE or DVT	1.5
Hemoptysis	1.0
Cancer	1.0

Treatment algorithm:

CASE-5

me R/F

A 65-year-old male presents to the emergency department with severe chest pain radiating to his back. He has a history of hypertension and smoking. His blood pressure is 180/100 mmHg, and heart rate is 90 bpm. An electrocardiogram shows no acute ischemic changes. CTA is shown. What is the next step for this patient?

- A) Immediate surgical repair
- ~~B) Intravenous beta-blockers~~
- C) Intravenous nitroprusside ~~XF~~
- D) Intravenous anticoagulation

aortic dissection

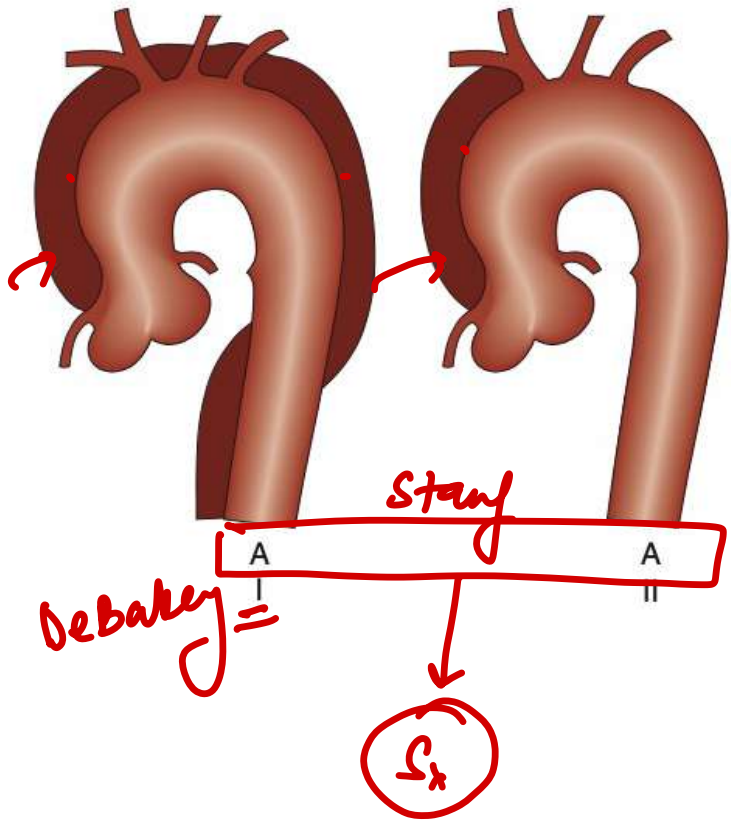

Asc Ao

Desc A

i.v. HYDROCORTISONE

treatment of electrolyte imbalance

1. Water restriction
2. 0.9% NaCl solutions if Na+ < 120 mEq/l

selected cases

1. Assisted mechanic ventilation in patients with respiratory acidosis
2. i.v. furosemide if pulmonary edema occur
3. Treat hypothermia (temperature < 35 C)

HYPOTHYROID COMA

BE AWARE OF:

- Concurrent hypoadrenalism (Schmidt's syndrome)
- Concurrent panhypopituitarism

↑↑
mortality

CASE-34

A 24-year-old man met with an RTA and was brought to the casualty after 6 hours. His B.P. was 90/60 mm Hg, heart rate was 110/min, and SpO₂ was 92%. A blood transfusion was done. After a few hours, the patient is febrile, tachypneic, and starts bleeding from the IV and NG tube sites. His SpO₂ levels started falling. What could be the cause?

- A. Acute hemolytic Transfusion reaction
- B. Non hemolytic Transfusion reaction
- C. TRALI
- D. TACO

Complication	Signs/Symptoms	Treatment
AF NHTR	Fever, Chills, Malaise Mc	Supportive-acetaminophen
HTR	Fever, chills, pain at the site of reaction, nausea/vomiting, shock, dark urine	STOP the transfusion IV fluids +/- diuretics ABO mis match
Allergic	Urticaria, pruritis, hives	Symptomatic-antihistamines.
TRALI	Dyspnea, hypoxemia, bilateral chest infiltrates HLA	STOP the transfusion airway control, supportive care
TACO	Dyspnea, edema, JVP Raised	Slow infusion + Diuretics
